

Dear Hiring Manager,

I am writing to express my interest in the React JS Developer position at your organization. With over 5 years of overall experience—including 3+ years of focused frontend development—I have built scalable, high-performance web applications using React.js, Next.js, Redux Toolkit, and TypeScript.

In my current role at Foxberry Technologies, I have developed and optimized multiple production-grade applications, including task management systems, employee tracking platforms, and content-driven applications. I have hands-on experience in building role-based dashboards, implementing complete application lifecycles, integrating REST APIs, and designing reusable component architectures to improve scalability and maintainability.

One of my key strengths is translating complex business requirements into intuitive and user-friendly interfaces. I have successfully implemented features such as real-time tracking systems, role-based access control, payment integrations, and analytics dashboards. My experience with tools like Tailwind CSS, Bootstrap, and modern frontend workflows enables me to deliver responsive and performance-optimized applications.

I am also comfortable working in Agile environments and collaborating with cross-functional teams to deliver high-quality solutions. My background in both technical development and earlier experience in sales and marketing helps me understand user needs and build more impactful products.

I am excited about the opportunity to contribute to your team and bring value through clean, maintainable, and scalable frontend solutions.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my skills and experience align with your needs.

Warm Regards,

Krupa Modi

Frontend Developer
